

Kern-Liebers Taicang & Expanite are expanding the cooperation in China!

Expanite – the Danish pioneer specializing in surface hardening of stainless steel and titanium and KERN-LIEBERS the global supplier to the automotive, textile machine and consumer goods industries, are expanding the cooperation in China.

Since Kern-Liebers and Expanite joined forces in 2017 and open the first Asian facility with Expanite processes, things have developed in a positive direction. The original reason for opening in China was due to request from German automotive suppliers for hardening of martensitic stainless steel, however, it turns out that the demand is much wider, and therefore, Kern-Liebers and Expanite recently agreed to expand the collaboration and services to include solutions for all stainless steel grades. This implies that Expanite's complete portfolio of hardening processes for stainless steel will be available through Kern-Liebers Taicang during the fall of 2019 – and it makes Expanite the only supplier of surface hardening which have their processes available in Europe, Nord America and Asia.

About Expanite A/S

Expanite offers state-of-the-art solutions for surface hardening treatment of stainless steels and titanium. With Expanite's processes, it is possible to increase the material's surface hardness tenfold while at the same time maintaining and even increasing its corrosion resistance. Expanite has a combined development and production facility near Copenhagen, Denmark, and hardening capacity in the US, Germany and China. Expanite's solutions are flexible and can be introduced directly into a customer's own production line as part of a licensing arrangement. Learn more on www.expanite.com.
