

Expanite still has the shortest lead time in the industry

At Expanite, we're committed to maintaining short lead times to ensure that our customers receive their parts back swiftly. Our standard lead time for stainless steel orders is **6-9** working days – the shortest in our industry – and if needed, we do have the ability to expedite orders within 3-5 working days; even sometimes day-to-day!

Expanite continually deliver on our short lead times thanks to our flexible production planning our patented technology and professional team. Our ability to adjust production practices, flexibility and technology allow us to do more in less time sometimes run on a day-to-day basis, resulting in lead-times significantly lower than alternatives keeping a high-level of quality.

“Our lead times –6-9 working days – are the shortest in the industry, and yet we can do better.”

(Almost) anything is possible!

Recently Expanite was contacted by one of our customers (one of the world's leading companies within machinery for the chocolate, bakery, and confectionery industries). To avoid production stop they urgently needed to have critical parts surface hardened for one their overseas installations. Expanite received the parts on a Saturday morning at our treatment site in Hillerød, Denmark and was able to return the parts in surface hardened condition to the customer at their production site the following Monday morning – extremely quick lead times – proven quality!
